

ASSET TRACKING MANAGEMENT

One of the most important Task of any business is the ability to manage assets by tracking them. Asset management can help to improve the efficiency, profitability as well as growth of business in nearly every industry

Asset Tracking System

- One of the most important Task of any business is the ability to manage assets by tracking them.
- Asset management can help to improve the efficiency, profitability as well as growth of business in nearly every industry. In particular, the use of RFID will provide solutions for the possibility of identifying information regarding the location of assets and the movement of goods.

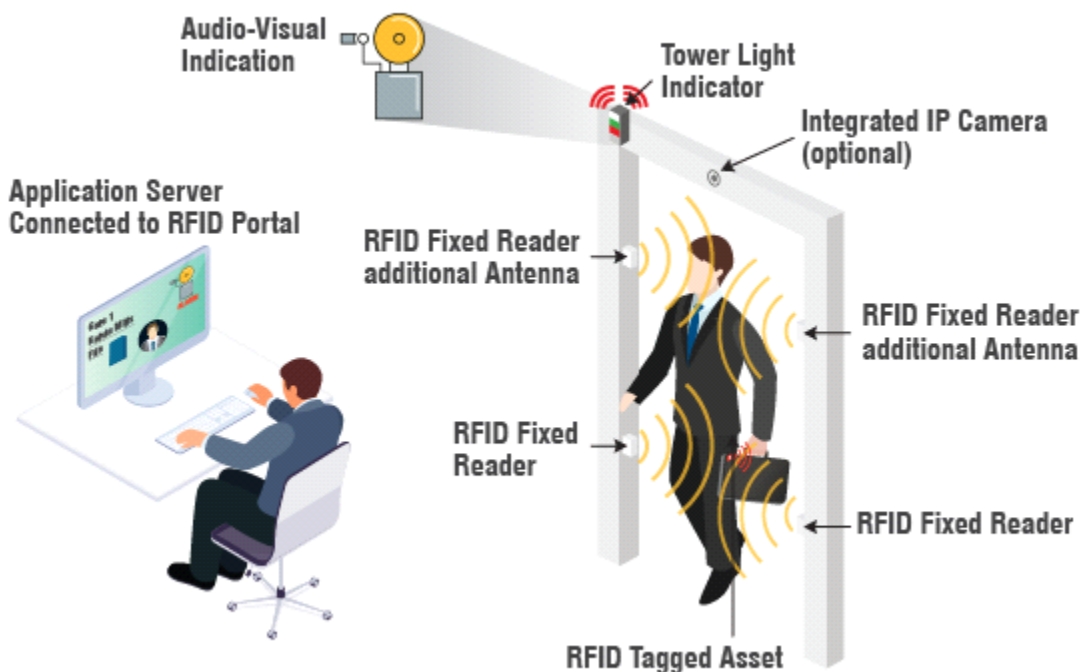

Overview

- **Identification of the Locations of Assets** : Many customers are concerned by the problem of location identification in the management of actual

assets. To overcome this problem CPTS has invented RFID based Asset tracking System.

- **Keeping the Data Up-To-Date** : One of the most important function in asset tracking system is keeping Data up-to-date. The function enabling simplified operation in the addition and updating of information, and the function for the automatic checking of whether or not each piece of information is the latest.
- **Tracking** : In case where the location id and the asset id are related, movement between locations can be tracked. Fixed readers can be strategically located throughout the facility to automatically track the movement of tagged equipment in and out of buildings, other sectors. Equipment movement can be automatically correlated with employee identification enabling secure and automated asset check out from stock rooms and tool cribs

Benefits Of Asset Tracking System

- **Imports and Exports** : We have provided importing and exporting tools including Microsoft Excel. Multiple assets can be imported on a single click with pre-assigned unique tags.
- **Technology Support** : CPTS Provides Asset Tracking solutions with RFID technology, where RFID Readers are mainly used to track assets.
- **Fully automated** : We have added so many facilities like paperless, fully digitized and flexible tracking and management solution which can work with multiple readers and databases. All the data will be stored in database with full security. Every asset can be linked to multiple users and vice-versa.
- **Auto tagging facility** : Multiple Assets can be assigned to unique and reusable Tag IDs on a single mouse click.
- **Data Backup** : CPTS ensures that there is no data loss. It provides automatic and manual backup facility.
